

Prevent common sampling errors and assure the accuracy of your environmental monitoring data with the new technician training program...

“Swabbing Techniques for Sampling the Environment & Equipment”

The Silliker, Inc., “Swabbing Techniques for Sampling the Environment & Equipment” Technician Training Program helps Technicians learn specific swabbing recommendations for spoilage organisms and pathogens.

Designed for use by managers and supervisors, the program includes the following training tools:

- A presentation on **CD with video clips and digital pictures** that demonstrate proper sampling steps and techniques
- A **facilitator’s tips and presentation guide** provide recommendations to customize content and conduct effective training sessions
- **A set of 5 technician workbooks** that provide learning objectives, step-by-step diagrams, interactive exercises, worksheets and challenging questions. Technicians can refer back to key steps and photos demonstrated while on the job.
- A **quiz** addressing key points of the program
- A customizable **Certificate of Achievement**

This program combines expert content, outstanding instructional design, and proven adult learning strategies to help companies effectively train their technicians.

This training program was developed in partnership with Biotrace International, Inc., an ISO 9001 manufacturer of high quality, specialized industrial microbiology products.
